

National integrated security, fire, communications and life safety system installers Thompson AVC have now expanded their range to offer the latest in biometric access control systems from *ievo*

After many years at the forefront of deployment, installation and integration of biometric access control systems, *ievo*'s specialist research and development team have created the latest evolution of the *ievo* reader.

The *ievo* reader has many benefits and innovative features, including :

- Fully networkable
- IP65 rated for internal or external use
- Vandal resistant
- Option for flush or surface mounting
- External readers operating down to -20°C without the need for additional housing
- Superior MSI reading technology
- System software seamlessly integrates with Paxton NET2 and ACT Pro software
- Available in any RAL colour to suit your needs
- Matches up to 8,000 registered users
- Incorporates a long life piezo button suitable for tens of millions of activations
- Controller / relays are housed inside the building, rather than inside the reader to ensure that the system cannot be shorted out to gain access
- User data is not held in the reader
- Supplied with security fixings and mountings
- Automated Audio capabilities
- Easy to use and install - 'Plug and Play' system

For more information on protecting your environment with the *ievo* reader, please contact Thompson AVC direct on:
