Audio Visual

The latest Audio Visual systems offer opportunities to display attention grabbing images, videos or graphics to visitors & personnel operating in dedicated or diverse environments.

From passive advertising display screens, networked digital signage, indoor, outdoor or interactive projectors, through touch screen displays or kiosks, to video walls, video conferencing or crystal clear professional audio systems, The Thompson Group can specify, install and maintain the most appropriate and cost effective audio visual systems to suit your needs.

Offering the optimum fusion of high tech, yet robust, visual and audio technology combined with the Thompson Group's 'Commitment to Delivering Excellence' ethos, providing the highest standards of quality and customer service; our clients can access the world of truly interactive and adaptable infotainment and communication systems supported by our customer driven engineering team.

Whether you require a simple advertising driven messaging system, Bluetooth enabled

display stands, Interactive map based navigational systems or a high end touch screen with integrated IP camera based imaging systems to 'immerse' the user in the display content, the options are many and varied.

The real benefits of working with The Thompson Group as a specialist designer, installer and maintainer of integrated security, fire, communications & life safety systems shines through, with our ability to override active displays with important life safety messages in situations such as a fire alarm activation; or utilising any systems with integrated audio capabilities to enhance the Public Address & Voice Alarm systems.
