## CCTV

**Closed circuit television is an extremely powerful deterrent against crime and vandalism, providing unobtrusive yet highly effective protection of both premises and people.**

The Thompson Group's in-house team of security experts can design, install and maintain the optimum combination of cameras, transmission and recording equipment to suit any project; whether it is a small industrial unit or the largest university wanting to protect several disparate sites on one centralised system.

With our in-depth knowledge of the industry and close working relationships with all major system manufacturers, we are able to offer a security solution to suit both your needs and your budget.

Our engineers are fully trained and accredited for the installation of CCTV and Internet Protocol (IP) CCTV systems.

At the Thompson Group we pride ourselves on designing and installing bespoke CCTV systems that are future proofed, enabling expansion or alteration to suit not only our clients current requirements, but also those of the future.

We provide anything from standard analogue, to the latest fully integrated IP systems with structured cable networks, cameras, routers and network video recorders, allowing users to remotely view and store images using their existing network or via the internet.

If you would like any further information on The Thompson Group and the systems and services that we provide, please contact us at:
