Fire

The early detection and notification of fire within a building is the key to maximising personnel and asset protection and minimising any business losses and disruption.

The Thompson Group are fast becoming one of the leading installers and maintainers of fire detection, notification & suppression systems. Successfully delivering fully integrated systems in the most demanding of environments within the public, private, education, retail, commercial and transportation sectors.

From conventional alarm systems and basic smoke detectors, through heat detectors and fire extinguishers, to the most advanced analogue addressable fire alarms and smoke aspiration systems which can detect the smallest particles of smoke, the fully trained and accredited Thompson Group team are able to fully protect both personnel and premises whilst ensuring compliance with BS5839.

Having undertaken a rigorous approval process, the Thompson Group are proud to have been appointed as one of the few fully accredited designers, installers and maintainers of Morley IAS, Notifier and Gent systems.

Making full use of our engineers range of skills and experience, The Thompson Group are able to design, install and commission fully integrated security and life safety systems to suit our clients requirements and budget.

If you would like any further information on The Thompson Group and the systems and services that we provide, please contact us at:
