Intruder

The use of effective intruder detection and alarm systems will not only deter potential offenders, but can also minimise any losses and assist recovery if a burglary takes place.

Many companies ignore the real cost of a break in, criminal damage or theft until it is too late. The theft of stock, hardware and increasingly data can leave your business in turmoil.

Although your insurance company may cover the cost of some of the losses, the true cost of the disruption could mean delays, lost orders or even lost customers.

From a simple 'bells only' alarm system to a fully addressable, monitored system with a host of integrated protection such as pressure pads and infra-red perimeter beams, The Thompson Group are able to provide a cost effective deterrent and protection, to ensure that your business can continue uninterrupted.

Whether you need silent notification of a perimeter breach, the invisible marking of property for later identification or the installation of an intruder alarm system that can identify a confirmed entry and remotely trigger a police response, our qualified and experienced engineers are able to design, install and maintain the appropriate system to suit your needs.

Working in partnership with the major product manufacturers, we are always able to offer the latest and most effective solution to combat any intruder.

If you would like any further information on The Thompson Group and the systems and services that we provide, please contact us at:
