Voice & Data

## Voice and Data infrastructure

**Modern commercial, industrial, education, retail and even social applications demand ever faster and totally reliable access to voice, data and visual information at any time of day.**

At The Thompson Group we see data and telecommunications networking as the backbone of our operations. It is how we are able to integrate a wide range of security and life safety technologies to provide comprehensive protection to our clients' employees, visitors and property.

Able to provide a single point of contact for contractors or end user clients, our team of specialist engineers are fully trained and competent installing voice, data, fire rated, copper, fibre optic or even wireless solutions.

We are constantly working to source, train and gain appropriate qualifications in the installation and operation of new systems related to our clients needs.

In addition to our more traditional high speed and high capacity copper and fibre network infrastructures; our engineers also have a wealth of knowledge and experience in designing and installing the latest Voice over Internet Protocol (VoIP) telephony solutions; providing significant cost savings and vastly improved functionality for our clients.

If you would like any further information on The Thompson Group and the systems and services that we provide, please contact us at:
